

Administrative Note to Cedar Valley Distribution Report for 2008:

Prepared: May 29, 2008

To Whom It May Concern:

In preparation for, and Prior to 2008 Assessment Billing, I audited the Water Commissioners Records for The Cedar Valley Distribution System to obtain Acre Feet totals for assessment purposes.

This required entering the surface water diversion readings into PC Divert to obtain Total Acre Feet Diverted. Results appear on the following Pages:

The data entered and calculated by PC Divert was used for the Assessment Acre-Feet Units for Assessment Billing.

Notation was made on the Water Commissioner's Records to reflect the corrections made. Some of the Automatic calculations done by the Water Commissioner's spreadsheets were not accurate, resulting in the differences found between the PC divert data and the WC's spreadsheet data.

I believe the data reflected on the attached pages provide an accurate representation of the amounts diverted by each of the surface diversions.

Note: The Water Commissioner currently does not read the groundwater wells associated with this system. Groundwater well readings were not obtained sometime prior to the 2006 season.
